

# Scientific Goals of SuperDARN

Topic	DARN Requirements	Additional instrumentation and data of particular interest
Structure of Global Convection	<ul style="list-style-type: none"> <li>-extended coverage in MLT and magnetic latitude</li> <li>-moderate spatial (~100 km) and temporal (~10 min) resolution</li> </ul>	<ul style="list-style-type: none"> <li>-Colaboration with modelers</li> <li>-Incoherent scatter radars</li> <li>-Ground magnetometer chains</li> <li>-Solar wind parameters</li> </ul>
Dynamical Studies of Global Convection	<ul style="list-style-type: none"> <li>-extended, continuous coverage in MLT and magetic latitude</li> <li>-Good spatial (~50 km) and temporal (~2 min) resolution</li> <li>-Multi-directional observations of common volume to determine instantaneous 2-D velocity vectors</li> </ul>	<ul style="list-style-type: none"> <li>-Plasma diagnostics from ISTP satellites</li> <li>-Incoherent scatter radars</li> <li>-Magnetometer and optical imager data</li> <li>-Conjugate radar observations</li> <li>-IMF and solar wind parameters</li> </ul>
MHD Wave Studies	<ul style="list-style-type: none"> <li>-Extended, continuous coverage in MLT and magnetic latitude</li> <li>-Good spatial (~50 km) and temporal (~2 min) resolution</li> <li>-Multi-directional observations of common volume to determine instantaneous 2-D velocity vectors</li> </ul>	<ul style="list-style-type: none"> <li>-Ground magnetometer chains</li> <li>-ISTP optical imager data</li> <li>-IMF and solar wind parameters</li> <li>-Plasma diagnostics from ISTP satellites</li> </ul>
Substorm Studies	<ul style="list-style-type: none"> <li>-Extended coverage in MLT and magnetic latitude</li> <li>-Good spatial (~50 km) and temporal (~1 min) resolution</li> <li>-Multi-directional observations of common volume to determine instantaneous 2-D velocity vectors</li> </ul>	<ul style="list-style-type: none"> <li>-Magnetometer and optical imager data</li> <li>-Conjugate observations from radars, magnetometers, and imagers</li> <li>-IMF and solar wind parameters</li> </ul>
Gravity Wave Studies	<ul style="list-style-type: none"> <li>-Large area coverage</li> <li>-Continous operation</li> <li>-good spatial (~50 km) and temporal (~ 10 min) resolution</li> </ul>	<ul style="list-style-type: none"> <li>-Optical and/or incoherent scatter radar data to provide conductivities and Joule heating rates</li> <li>-Density profiles from ionospheric sounders</li> </ul>
High Latitude Plasma Structure Studies	<ul style="list-style-type: none"> <li>-Large field-of-view, including the polar cap regions</li> <li>-Continuous monitoring of the source region(s)</li> </ul>	<ul style="list-style-type: none"> <li>-Polar cap all-sky cameras and photometers</li> <li>-Ionospheric sounders and/or incoherent scatter radars</li> </ul>
Ionospheric Irregularities	<ul style="list-style-type: none"> <li>-Multi-frequency observations of common volumes</li> <li>-High temporal (~1 min) and high spatial (~30 km) resolution</li> </ul>	<ul style="list-style-type: none"> <li>-Plasma diagnostics from ISTP satellites and incoherent scatter radars</li> <li>-Field-aligned current measurements from satellites</li> <li>-Scintillation measurements for km-scale irregularity structure</li> <li>-VHF radar measurements for us in conjunction with multi-frequency HF observations</li> </ul>
